

ProVation® Order Sets

powered by UpToDate® Decision Support

ProVation

**ONE CLICK** Updates

Enabled by our unique, structured approach to data management, **One Click Updates** provides ProVation Order Sets customers with the ability to easily update their order sets as new evidence becomes available.

ProVation One Click Updates:

- › Tracks the evidence
- › Presents the recommended updates
- › Lets you apply with just one click

Making order set maintenance a one click event.

***Let us do the work—
so your team can do theirs.***

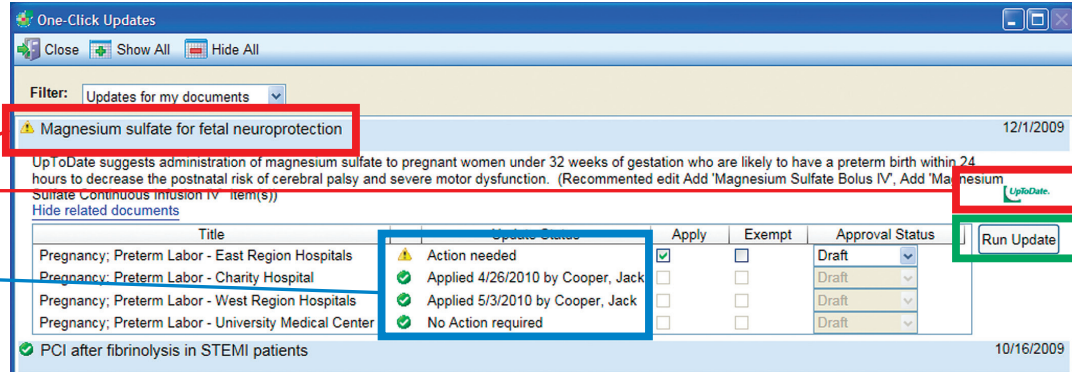

One Click Advantages

- ④ Presents a concise, practice-impactful summary of new medical evidence that affects the content of your facility's order sets.
- ④ Identifies order sets in your customized library that may require modification for each new piece of evidence.
- ④ Allows for fast, global incorporation and deployment of changes based on new practice-changing evidence.
- ④ Tracks all changes, advances the version number of each order set and places events in history log.
- ④ Complete integration with UpToDate allows for easy maintenance of order sets, with no manual intervention to update supporting evidence links.
- ④ Helps improve patient care, reduce medication errors and increase patient safety.

1-2-3-Click

How We Work for You

1. See the new practice-changing updates that apply to your library of order sets. Working in collaboration with UpToDate , our editorial staff identifies the new evidence that matters most regarding order set content.
2. The ProVation software notifies you of the order sets in your customized library that are affected by new evidence.
 - ✅ The check mark icon identifies your updated status.
 - ⚠ The exclamation icon informs you of recommended action.
3. Click on the Run Update button and ProVation One Click Updates applies the recommended changes to your order sets with just the push of the button.

Just One Click to Order Set Maintenance

One Click Evidence

With just the push of a button, ProVation One Click Updates will deliver the latest, most relevant evidence to your facility's order sets and help you overcome the greatest hurdle to reinforcing standards of care — order set maintenance. ProVation One Click Updates brings you immediate and dynamic integration with UpToDate, the premier decision support resource that includes more than 7,700 continuously reviewed and updated topics, with links to Medline abstracts, more than 260,000 references and a drug database.

One Click Technology

To work effectively, an order set maintenance tool requires a rigorous data structure with robust underlying data organization and strong associated reference content. Without this, no software program can positively identify those data elements within order sets that require updating or are affected by changes to evidence.

ProVation Order Sets codes all orderable items and their attributes, to national recognized terminologies, such ICD-9, SNOMED CT®, CPT®, LOINC®, and RxNORM.

One Click Results

ProVation One Click Updates notifies users when an order set needs changes or maintenance, allowing the user to apply updates both quickly and globally — keeping the order sets current at all times. Multiple studies have shown the positive effects of evidence-based order sets on outcomes, but order sets must remain current in order to decrease the risk of errors and adverse events. Only ProVation Order Sets offers the structured data architecture and integration with UpToDate that allows for continual, easy maintenance of evidence-based order sets.
