

ProVation® Order Sets

powered by UpToDate® Decision Support

The integrated power of two leaders

ProVation Order Sets, powered by UpToDate Decision Support

Better Evidence

ProVation Order Sets, powered by UpToDate Decision Support, offer evidence-based order set content with complete, dynamic integration to UpToDate. The premier decision support resource, UpToDate includes more than 7,700 continuously reviewed and updated topics, with links to Medline abstracts, more than 260,000 references and a drug database.

Better Technology

Based on the proven ProVation Medical technology platform, ProVation Order Sets deliver the highest degree of automation and integration in the order set integration process, facilitating EMR and CPOE integration through structured content and a robust order catalog mapped to multiple standard terminologies.

ProVation Order Sets streamline workflow with an easy-to-use interface, customization and mapping capabilities, and link directly to UpToDate or your licensed evidence provider. Our localized server approach eliminates the slow downs that can occur with web based applications, and ensure that you control and own your order set environment and intellectual property.

Better Outcomes

Multiple studies have shown that use of evidence-based order sets can decrease the risk of medication errors, help standardize care, improve ordering practices and quality of patient care, reduce adverse drug events as well as potentially harmful and unnecessary treatments, and reduce evaluation and treatment time.

ProVation® Order Sets

powered by UpToDate® Decision Support

ProVation Order Sets Components

- **UpToDate Evidence Source**
The premier, evidence-based clinical decision support system, giving clinicians concise, practical answers they need at the point-of-care.
- **ProVation Order Sets Content**
Includes hundreds of predefined order sets spanning emergency, inpatient, and outpatient settings for both adult and pediatric patients across numerous medical specialties
- **ProVation Management Tools**
Simplifies the order set development and management process with robust content tools and supporting links to UpToDate evidence. Allows users to define the review process and create a centralized electronic library and archive for each order set
- **Content Update Tools**
Notifies users of an established Order Set needing changes or updates, allowing the user to apply both quickly and globally, keeping the order sets current at all times

Benefits

- Complete integration with UpToDate allows for easy maintenance of order sets, with no manual intervention to update supporting evidence links
- Positions hospitals for achievement of meaningful use through evidence-based clinical decision support and order sets
- Allows hospitals to establish standards of care and achieve regulatory compliance
- Helps improve patient care, reduce medication errors and increase patient safety
- Simplifies authoring and maintenance, with practice-changing updates that notify you when new evidence affects your order sets
- Offers integration with CPOE and EMR systems
- Provides local installation for facility ownership, reducing total cost over time

What Sets Wolters Kluwer Health Apart:

- More than 200 years of medical publishing experience
- Content breadth and quality with over 4,000 publications
- Hundreds of experienced physicians, nurses and pharmacists on staff developing content for solutions like ProVation software, UpToDate, Facts & Comparisons® and Medi-Span® drug information
- 360,000 UpToDate physician subscribers ensure physician utilization and adoption
- Dedicated customer support and commitment, a proven implementation process based on more than 15 years of experience
- Continual, rigorous product development and collaboration with customers
